Super Smash Bros for Android .Cellular expression and structure-function analysis of ICR II in transgenic mice. Intracellular retention regulators (ICRs) are a family of proteins that are involved in the intracellular retention of proteins with Lys residues. To date, three mammalian ICR proteins, namely, IC74, SR45, and ICRII, have been identified. The domain structure and expression pattern of these ICR proteins are distinct, but the in vivo functions of each ICR protein remain unclear. In this study, transgenic mice were generated to examine the in vivo functions of ICRII and the pathogenesis of breast cancer. We generated transgenic mice expressing ICRII under the control of a tetracycline-responsive promoter and demonstrated that these mice express ICRII in a regulated manner in all tissues of the transgenic mice, regardless of age and gender. To determine the function of ICRII in vivo, we established two mouse lines with similar genetic backgrounds but expressing the human ICRII protein in the mammary gland: one line overexpressing human ICRII in the mammary gland and the other expressing mutant ICRII that lacks the nuclear localization signal. The results of this study demonstrated that overexpression of human ICRII in the mammary glands led to hyperplasia of mammary glands with the formation of terminal end buds, inhibition of epithelial differentiation, and increased cell proliferation in the gland. However, the null mutation of ICRII by using a targeted ICRII-deficient mouse line did not lead to any observable phenotypes in the mammary glands. These data suggest that ICRII has a growth-promoting function in the mammary gland. The embodiments described herein relate generally to a micro-electromechanical system (MEMS) device and, more particularly, to a MEMS sensor and/or a power management system for the MEMS sensor. Many MEMS devices include a MEMS sensor. The MEMS sensor is used for determining various properties of a fluid or gas such as the pressure or viscosity of the fluid or gas. For example, pressure sensing devices are used to determine the pressure of an atmosphere at a given location. Similarly, flow sensing devices are used to determine the rate of flow of a gas or a f678ea9f9e
